

Switch languages

June 30, 2022 • Jan Cerman • 1 min read

Once you configure languages in the [Localization settings](#) of your project, you will be able to choose a language variant for your content in the content list or when editing a content item.

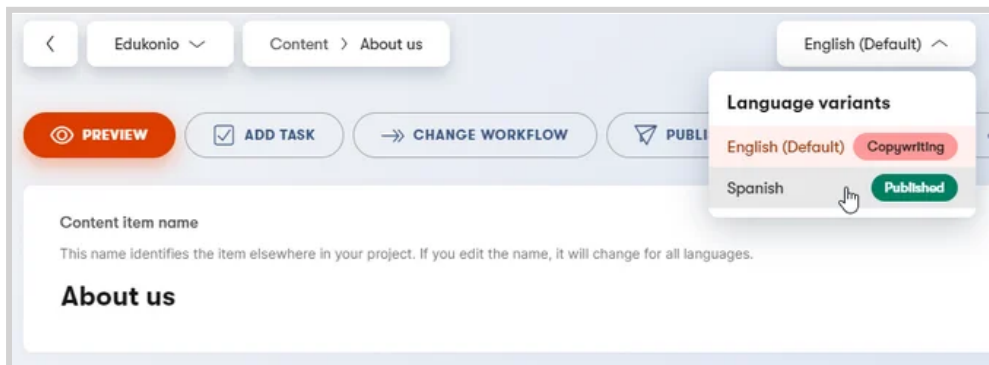

Switching languages in the content list

To switch to a different language in the content list, click the language switcher in the top-right corner and select a language.

Switching languages while editing content

To change the language variant of the content item you are currently editing, use the language switcher in the top right.

i If you switch to a language variant in which the content item doesn't exist yet, Kontent.ai automatically creates an empty draft in the selected language. See [Translating content items](#) for more information.

What's next?

— Manage your current project languages – [add new languages](#) or [deactivate existing ones](#).
