

# Manage Kontent.ai

June 29, 2022 • Tomas Nosek • 1 min read

Whether you're [setting up Kontent.ai for the first time](#) or tweaking an already running project, it's easy to miss something important, that one particular setting you're after. This is just the section for those tasks. Find out how to configure what you need in this section.

Kontent.ai offers its users a variety of features that can make [content types](#), [role configuration](#), and [collaboration under a workflow](#) effective.

See how to manage all important details about your Kontent.ai [subscription](#) to ensure your [projects](#) are working as desired.

Use the page tree on the left to pick what you're looking for. Typically, our users look for these:

- [Create or delete content types](#) so that they serve well to your [content model](#)
- [Set up languages in your project](#) after you've read through [using regional content](#)
- [Create taxonomies](#) to classify your content
- [Use taxonomies](#) to plan your releases and perform bulk operations on content
- [Create, archive, or delete projects](#) in your subscription
